## ***Fulton Provides Deaeration Solutions***

Fulton can meet your space and system constraints with our full line of vertical and horizontal Deaerators. The Deaerator shown is an FBD-80V deaerator with stainless steel pressure vessel and fittings. The capacity is 2800 lb/hr to 0.005 cc/liter oxygen. The end customer is a leading supplier of water treatment chemicals and the deaerator is part of the steam system used for the production of these specialty chemicals. Stainless steel was utilized because of the aggressive water conditions at the plant. Our deaerator line is available to 900 BHP.
